SKILLS SUMMARY

Languages C++, Java, Python, C#, SQL

Backend and Distributed Systems Spring Boot, Microservices, REST APIs, Object Oriented Programming, Event-Driven Architecture, Kafka/Varadhi, Pub/Sub, Quartz, Circuit Breakers

Databases, Cloud and Tools MySQL, MongoDB, Kubernetes, Azure, System Design (LLD, NFRs, Scaling), Prometheus, Grafana, Git, GenAI (Cursor, GitHub Copilot)

EXPERIENCE

FLIPKART

Software Development Engineer-I

Bangalore, India

Jul 2024 - Apr 2026

- **Built High-Throughput Real-Time Benefits Engine:** Led end-to-end design of a unified service consolidating all user benefits into a single source of truth, eliminating **24-hr delay** via event-driven architecture (Varadhi) enabling near real-time computation for millions of users.
Scaled system to **110x reads** and **3600x writes**, built resilient enrichment pipeline with circuit breakers, and fixed critical attribution bug ensuring accurate tier-based benefit calculation.
- **Tiered Membership Architecture and Plus Rehash Migration:** Led Plus Rehash migration introducing tiered membership (Silver/Gold/Silver Trial), designing a backward-compatible dual-ID (Tier+Version) system, maintaining backward compatibility across 10+ downstream services while driving **INR 3500 Cr** GMV uplift. Architected scalable backend for **450M+ users** with **15+ tier scenarios**, doubling page visits and delivering **30k-50k daily activations (90%+ conversion)**, improving recency by 140 bps and monthly spend by **7.5%**.
- **High-Scale LOA Service Optimization:** Scaled service to **11k peak QPS (+50% from the previous year)** during Big Billion Days with zero downtime, leading NFRs, capacity planning, and thread optimizations that **reduced API latency by 40%**.
Strengthened resilience via rate limiting, quota tuning, degradation playbooks, and cross-region failover drill (100% traffic shift), while implementing async structured logging reducing debugging time by **40%** and storage by **50%**.
- **GenAI Driven Productivity Boost:** Leveraged Cursor and GitHub Copilot to automate unit tests and code generation, raising UT coverage from **60% to 80%+** for User Manager service beyond the compliance threshold. Improved dev productivity by **15%** and reduced turnaround time by **25%**.
- **P0 Stability Fix and Large-Scale Recovery:** Resolved critical issue impacting **635k** orders by fixing reconciliation bugs and executing large-scale recovery, reducing user escalations by **96%**. Eliminated infinite retries via custom exception framework, **cutting Coin Manager API failures by 60%** and improving system stability and MTTR.
- **Tech** - Backend Development, Java, Spring Boot, Microservices, Event-Driven Architecture, Apache Kafka/Varadhi, Quartz Scheduler, Data Structures and Algorithms, REST APIs, Hystrix, Kubernetes, MySQL, Distributed Systems, High-Availability Systems, NFR and Load Testing (System scaling), Git, GitHub, CI/CD, GenAI Developer Tools (Cursor, GitHub Copilot)

MICROSOFT

Software Engineer Intern

Hyderabad, India

Jul 2023 - Aug 2023

- Extended an auto-troubleshooting and remediation platform for network devices implementing an end-to-end backend execution pathway to support unique non-incident request sources beyond ICM (e.g., non-incident and copilot routes), enabling 'command' and 'workflow' execution across additional entry points.
- Validated system scalability by conducting a proof-of-concept load test simulating **200k+** concurrent non-incident requests, ensuring reliable execution and performance under high-volume traffic.
- **Tech** - Back-end Development, Microsoft Azure Cloud, ASP.NET, C#, Microsoft SQL Server, Azure Functions, Azure Service Bus, Postman API testing, REST API, Git, React.js, Microservices, Distributed Messaging Architecture

EDUCATION

KIET Group Of Institutions

Bachelor of Technology - Computer Science, CGPA: 8.6

Delhi-NCR, India

Nov 2020 - Jul 2024

PROJECTS

Facial Recognition Based Attendance Tracker (Individual, May 2022) Created the web space for online attendance tracking of students through facial recognition. Researched and integrated face-api to the webpage for face recognition and tracking. Integrated Google Firebase to store the student records in the database.

Tech: React js, Node js, SASS, Google Firebase, Face-recognition-api

HONORS AND AWARDS

Received Instant Karma Award for driving the successful launch of the Flipkart Loyalty Plus Revamp – Apr 2025

Winner of Innotech 2K22, Institute Level Technical Fest – May 2022

Semi-Finalist, Accenture Innovation Challenge – Aug 2021
